

VITA

VALIDATION OF SERVICE RELATED LEARNING OUTCOMES WITH AN IT-BASED ASSESSMENT & EVIDENCING SYSTEM

European societies are ever more based on the service economy

- Professional lives are increasingly determined by the need for continuous learning to adapt to rapidly changing demands and concepts like customer orientation, team work, communication etc.
- Especially social competences are necessary for effective management in the service sector and are becoming competitive factors at the job level and as such aspired competences both for employment and societal reasons.
- VITA makes use of the LEVEL5 approach and blends formal validation approaches based on the EQF with the ICT-based LEVEL5-system designed to assess and evidence cognitive, affective and activity related learning outcomes of informal learning settings.
- The VITA project is part of a series of projects on validation of informal learning outcomes funded by the Lifelong Learning Programme.
- The VITA project partnership is composed by partners from different educational fields in nine European countries.
